ClearCubes PCO™

Ice Machine Disinfection

CLEAN
FRESH
ICE

Photocatalytic Oxidation (PCO) Technology

ClearCubes PCO is an Active Air Purification System for ice machines that **reduces and eliminates biological growth on ice machine interior surfaces and components.**

- Contributes to overall establishment safety through cleanliness.
- Dramatically reduces ice machine cleanings due to bio-growth. Saves on maintenance costs.
- Does not discolor or affect taste. Odors are broken up by the PCO oxidation process.
- Prolongs overall life of the ice machine.
- Reduces the risk of inspection failures.
- Operates 24/7 to prevent bio-growth from becoming established.
- Minimal maintenance: annual UV lamp replacement, washable air filter.

ClearCubes PCO™ is the Ideal Solution for Maintaining High Quality Ice

Traditionally, ice machines are periodically cleaned to remove bio-growth. However, after a cleaning, bio-infestation re-starts, imperceptibly at first, but over time building up until the next cleaning.

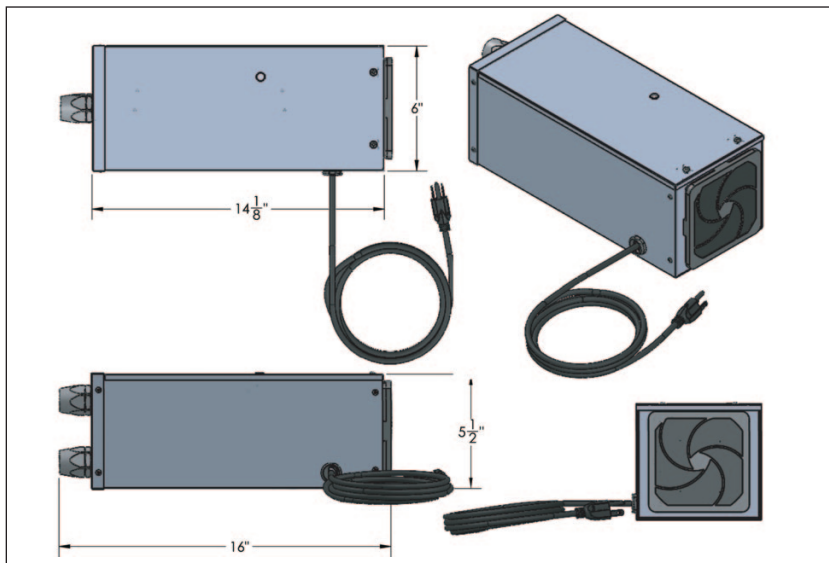

The disinfection power of Clear Cubes PCO™ reaches every nook and cranny to oxidize organisms and airborne chemical contamination such as smoke and VOCs to keep ice as fresh as possible.

PCO process oxidizes contamination into basic molecules

Dimensions

Ultravation Clear Cubes PCO™

Model Number	Product Description	Operating Voltage	Module Length
CC-PCO-4-120	PCO Ice Machine Purifier	120	4"
CC-PCO-8-120	PCO Ice Machine Purifier	120	8"
